

Bardawil & Co.

CONSTRUCTION EQUIPMENT & MATERIALS S.A.R.L.

Proven reliability since 1945.

Product Specifications ***Furukawa – Hydraulic Breakers***

A hydraulic breaker is an attachment fitted to excavators for demolishing rock, concrete structures and so forth. We supply a wide range of hydraulic breakers from small to super large for rock demolition in order to meet various needs. Currently we are making contributions towards infrastructure construction at civil engineering work sites, etc.

Low-Noise Hydraulic Breakers

In order to improve operating environments, we have thoroughly pursued ways to control noise and vibration generated by hydraulic breakers and dramatically reduced noise made by striking and vibration by covering the whole breaker with a special damper. Controlling noise made by striking metals enabled for breakers to be operated at many more locations, and controlling vibration greatly reduced operators' fatigue.
